This free report is a list of twenty proven ways that I've used to boost my website's traffic. Use any or all and get more traffic quickly...

1) Yahoo Answers.

You can go through and start answering questions at answers.yahoo.com. You'll be surprised at the many questions left unanswered in many categories. You can become an "expert" within many fields by answering questions, and having relevant links point back to your site. It's a quick way to build back links and actually have targeted users viewing your site.

Check it out at answers.yahoo.com

Be sure to never spam. It's important to be friendly with your answers, and provide good relevant information. The goal here is to have the user to trust you.

To get started simply browse the categories or you can search for questions. For example, you can do a search for "making money" and it will produce questions people have asked about "making money".

You are allowed to provide links to "resources" online that confirm your answer or provide help for the person who asked the question. That link can be one back to your site, blog or service – especially if they asked a question like, "Where can I get the best _____?"

2) Twitter.com

Create a Twitter account and start developing a list of followers.

- a. Never spam and do not send out blatant ads.
- b. Go to search.twitter.com to find people talking about your point of interest then follow them. They will typically follow you back.
- c. Post on your blog and let your followers know something new is there.
- d. Find e-books (or write one) and set up a subscribe form (trade email for the book). Announce on Twitter.
- e. Tweet at least 3 times a day.
- f. Use catchy titles, anything boring will be ignored.
- g. Remember that ANYONE can see your Tweets so be careful about what you say.
- h. To automate Twitter, try SocialOomph.com. Schedule Tweets throughout the day.

3) Yahoo Groups

Join yahoo groups. I've joined groups within the "Home Business" section and promoted my products/services to group members. You can also create your own group as well. One of the keys here is to offer free reports and tools to the users, and then use that free report to up sell your main products/services.

You can find home business groups at the link below:

http://finance.dir.groups.yahoo.com/dir/Business_Finance/Home_Business

The marketing/advertising groups at the link below:

http://finance.dir.groups.yahoo.com/dir/Business_Finance/Marketing_and_Advertising

4) Stumbleupon.com

Download the stumbleupon toolbar and ensure you click "I like this" to all of your websites, and have your friends and family do the same and click the "I like this" to all your sites.

Also create pages specifically for stumbleupon that either is funny and odd, which can range from funny pictures to funny videos. You'll find many users clicking "I like this" and on those pages you should have links to all your other sites, and perhaps even Google AdSense to earn money from all the visits you'll receive. This works well since Stumbleupon users love to browse sites that have odd and funny stuff, or even free stuff would work good as well.

5) Forum linking

Go to Google and search for "forums+[keyword]" (leave the "" off and where it says [keywords] only place your keyword phrase there. For example, if you are looking for forums about billiards, search: forums+billiards.

Every forum you join, always have a signature file that contains links to your most treasured websites. Be sure to use your preferred keywords within the links or perhaps catchy titles to entice clicks.

6) Craigslist.org

Submit free ads to craigslist.org. Be sure not to spam the classifieds.

One or two ads per week in a few select cities are fine. If you submit too many then your ads can be flagged or labeled as spam, so be careful with how many submissions you make. Always use catchy titles to ensure your ad is read.

7) Site maps

Always have a site map for all your sites, and ensure the site map is submitted to Google. You can create a free site map using the following site.

<http://www.xml-sitemaps.com/>

Once your site map is created, then upload it to your site, then submit it to Google using the link below:

<https://www.google.com/webmasters/tools/siteoverview?hl=en>

8) E-Book Giveaway

If you have an e-book, give it away free, this can help build your mailing list and get more traffic to your site and offers. Ensure the e-book is of good value and that you'll have an up sell product to then make money from the subscribers at a later date.

It's good to have an e-book about your industry or a product/service within the industry. Can't find one? Write one yourself. I know that sounds hard but it's really not.

Ideas:

- Top service tips
- Ways to take care of your _____
- How to choose the right _____ for you

Write your e-book just like you were talking to someone. Double space the lines of content and use 14 point font. You will probably write about 20-30 pages of content within an hour or two. You will be surprised how much you know about the industry compared to the "average" person.

Convert the book to Adobe PDF. If you do not have a PDF converter, Google "Free PDF Converter" and you will find quite a few ready to download.

9) Wordpress for Website Design

When having your website designed it's best to use Wordpress and host it at a hosting account that you pay for (not at Wordpress.com). Get Wordpress at www.wordpress.org. Make sure you install the important plugins as well. They include:

- Platinum SEO
- Add to Any

- Contact Form 7
- Google Analyticator
- Google SiteMap Maker
- PageMash
- WP_Dbmanager

10) Submit To Directories

Most people already do this, but just in case you haven't, you should submit to directories. You can find a list of directories below:

<http://strongestlinks.com/directories.php>

The above list some of the better directories to submit to. By submitting to these directories you can acquire back links and more traffic to your site.

11) Tell a Friend

You can install a tell a friend script to your site that will allow users to "refer" your site to their friends and colleagues. The downside to this is that some spammers try to manipulate tell a friend scripts. Be sure the one you use actually has "image verification" to limit form manipulation; otherwise you may find spammers trying to use your form to send spam.

Wordpress has a Tell-a-Friend plugin called [JR_TellYourFriends](#).

12) Search Engine Optimization

Always read up on the latest with optimizing your website for search engines. Some good forums to review for free tips are:

<http://www.sitepoint.com/forums/forumdisplay.php?f=3>

<http://forums.digitalpoint.com/forumdisplay.php?f=12>

<http://forums.seochat.com/>

<http://forums.searchenginewatch.com/>

<http://www.searchengineforums.com/apps/searchengine.forums/>

I would join each of these forums or at least review the forums for the latest tips and strategies on search engine optimization.

13) Squidoo.com, HubPages & More

Create a lense at squidoo.com. Create a hub at HubPages. You can also create pages, blogs, ,etc. at WetPaint, Wordpress.com, Blogger,

14) Social bookmarking sites

Submit to each of these sites.

<http://del.icio.us/> PageRank: 8/10
<http://www.furl.net/> PageRank: 7/10
<http://www.simp.com/> PageRank: 7/10
<http://del.icio.us/> PageRank: 8/10
<http://www.backflip.com/> PageRank: 6/10

<http://socialbookmarking.org/> PageRank: 5/10

Or, make things easier on yourself and get a free account at www.onlywire.com.

15) Article Promotion

Write articles are short reports and submit to ezinearticles.com, goarticles.com, articlecity.com.

16) Ping

Each time you make a change on your blog, Ping it to the popular pinging sites. Use Ping-O-Matic, Ping.fm, Pingoat or a number of others.

17) Video

Create a small video using your phone or video camera. Post it to YouTube or one of the many video sharing services online.

You can also create a video at animoto.com. Although they have a free service, you can not remove the video from their servers. You have to subscribe to their paid service, which is well worth the money.

18) Alexa.com

Review popular websites on Alexa.com, and at the end of the message have your URL listed. It may not hyperlink automatically but a few people may still copy/paste into their address bar. Just make sure your post is really a review and not spam.

19) Newsletter Box

Always have a newsletter box on your website that will allow all visitors to subscribe for updates on your site. This can be a real winner, as you'll be able to market your product or service to these subscribers. You can use aweber.com, getresponse.com, constantcontact.com for the newsletter subscriptions.

Wordpress also has a plugin for this. It's called autoresponder-gwa.

20) Pay per Click search engines

I've listed this last since almost everyone does this, but I can't have a list of marketing tips without mentioning PPC. [Google Adwords](#), [Microsoft Ad Center](#) and [Yahoo Search Marketing](#) are the big three. Other options are [SearchFeed.com](#), [Goclick.com](#).

For a comprehensive list of pay per click search engines see link below:
<http://www.payperclicksearchengines.com/>

Be careful though. Learn about PPC (Adsense and Adwords) before jumping in too deep because do it wrong and it can cost you a lot of money. Make sure that you use good buying keywords; not informational ones. (i.e. "digital camera" is an informational keyword because the searcher is still deciding what to buy. However, "Canon Sure Shot a1100" is a buying keyword. These people know exactly what they want and have their credit cards ready.

Also, check competition. Use the [Google Keyword Tool](#) to find good quality keywords and to check competition.

Conclusion and a Special Value offer you shouldn't miss...

Hopefully one or more of the marketing options mentioned caught your eye. I've used these various avenues to boost traffic to my sites on a regular basis. You may not get a flood of traffic overnight, but combining these methods can result in gradual increase traffic, and in some cases you can receive a tremendous boost. It's all about your efforts and sometimes having luck on your side helps as well :)

But... if you don't want to rely on luck and are still a little unsure where to go from here and what to do next, **I have just the tool/system for you.**

It's the ultimate traffic tool and it's absolutely unique.

While other tools restrict you to one method or another, whether it be Article marketing, Social marketing, Pinging, Directory marketing, Bookmarking, or Directory Submissions, this tool explains each facet then guides you through all the right places to target for maximum traffic.

The resources within this tool are INCREDIBLE! Nowhere else will you find such an extensive list of places to market your site with the necessary training and tips to ensure you do everything correctly so your link, bookmark, etc. remain permanently where you left it.

Just think how much you can accomplish with a tool that provides you resources like:

- 462 Bookmarking sites
- 25 DIRECTORIES of SEO-friendly directories (think about this)
- 253 blog platforms
- 414 Social Networks
- 227 Video Portals
- 67 Press & Media Release Centers
- Access to the leading Ping sites
- Backlink Spy Tools
- EDU Link Finders
- Secret Links to Free & Low Cost Automation Tools
- 172 Forums
- And much, much more. (In fact, I didn't even BEGIN to touch everything here)

Now, you would expect to pay quite a bit for a tool of this caliber. I know that I've spent \$197-\$397 for tools that do not do near as much as this one does.

However, the developer and I are friends and because of that, he has agreed to give me a *VERY SPECIAL RATE* for everyone who reads this e-book.

The cost of this tool, through the link below, is so low you'll be amazed. I'm not going to tell you what it is yet because I want you to go to the page and read everything this incredible system does.

It will blow you away!!

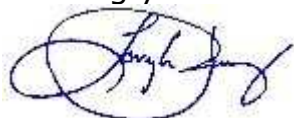

I've been using it regularly for a long time now and every other time I open it I find another section that I didn't see before. And, that's one of the greatest assets of this system --- Developing your own traffic should look completely generic; coming from every direction imaginable.

With this tool you can generate traffic from all kinds of ways never duplicating efforts --- month after month after month. The Search Engines won't know what hit them and you'll surely dominate your niche or industry with the kind of strength that will keep you on top forever.

Check it out at:
